

TSS Monitoring System

(Snapshot Camera with TSS Sensor)

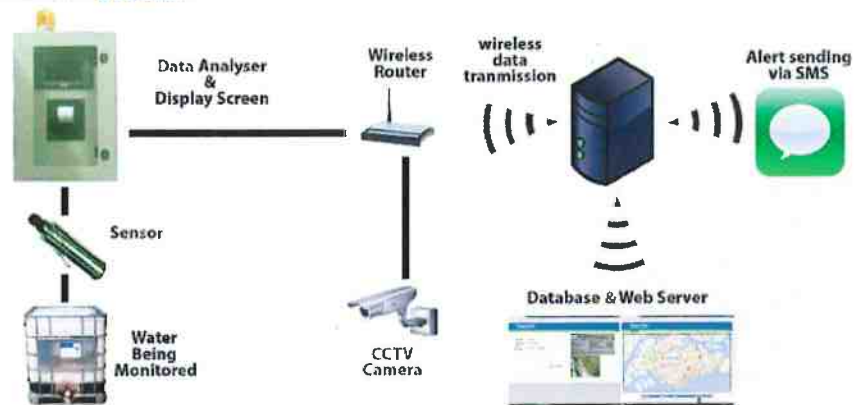

Compliant with PUB requirements for silt control

Our TSS Monitoring System (Model: TSC) is a Snapshot Camera System that is designed to capture and monitor discharge from site when installed at public drains near the site discharge outlet. With our real time colour image, users are able to compare the water visibility colour of the site discharge at the outlet against that of the upstream flow of the public drain. For this system, users are able to receive TSS readings detected by our TSS sensor via SMS.

FEATURES:

- High precision water quality measurement
- Real-time data analysis and display
- Monthly water quality reports can be retrieved
- Web-based CCTV monitoring
- Automatic SMS alerts sent to users
- Data uploading via wireless network
- Easy access to online display of images and data via smart phone and PCs without need to install extra / specific software
- Images imprinted with short description of project title and date / time stamp
- Real-time display of colour images
- Records of images up to specified period available
- Waterproof housing
